1 / Feria Valencia

Feria Valencia is one of the leading venues in Spain and Europe, with more than a century of history driving economic development, business innovation and the international reach of productive sectors.

Founded in 1917, it is the country's oldest event organiser and currently has one of the largest venues in the world, with more than 230,000 m², prepared to host any kind of event (trade fairs, congresses, conventions...)

Throughout its history, Feria Valencia has evolved from its initial vocation of promoting industry to becoming a structural driver of the Valencian economy and a meeting platform for companies, professionals and institutions.

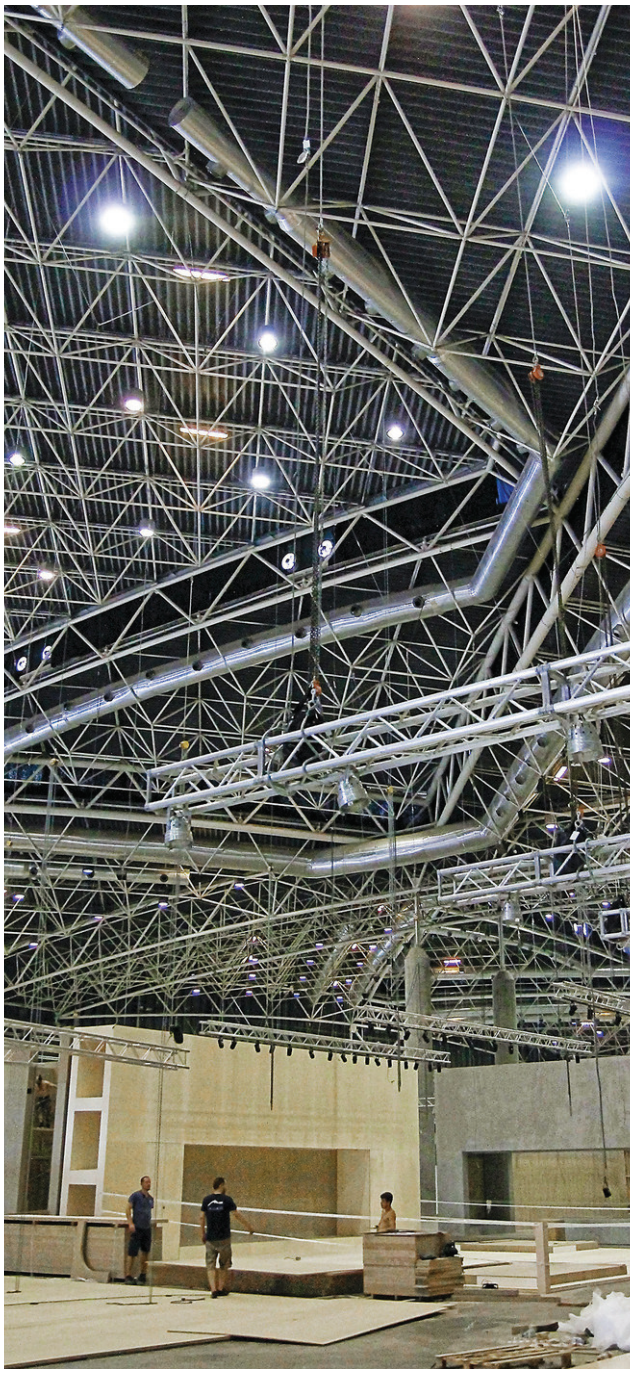

Its activity generates a significant economic impact every year in sectors such as industry, trade, hospitality, transport and professional services, making a significant contribution to wealth and employment creation in the Valencian Community.

Beyond its direct economic impact, Feria Valencia acts as enabling economic infrastructure, multiplying business opportunities for thousands of companies—most of them SMEs—and facilitating their access to new markets, customers, knowledge and innovation.

Alongside this economic dimension, Feria Valencia plays an important social role as an institution with deep territorial ties and a clear public-service vocation.

The venue has demonstrated its social usefulness as critical infrastructure in exceptional circumstances, placing its facilities and resources at the service of citizens and public administrations in emergency situations.

From this position as a strategic asset for the territory, Feria Valencia faces the challenge of moving towards a more sustainable development model, progressively integrating sustainability as a cross-cutting pillar of its activity and strengthening its role as a platform capable of generating economic, social and sectoral impact through the events it organises and hosts.

2 / Feria Valencia's impact on sustainability through the SDGs

Building on Feria Valencia's role as economic and social infrastructure, this section analyses its contribution to sustainability using the Sustainable Development Goals (SDGs) as a framework of reference.

Feria Valencia's impact on the SDGs is directly linked to its activity model. As a venue, its contribution is not limited to venue management, but extends to the economic, social and sectoral activity generated both by the events it organises and by the external events it hosts. This dual dimension—managing entity and meeting platform—strengthens its capacity to influence key areas of sustainable development.

In managing the venue, sustainability is progressively integrated into policies, investments and operational practices, addressing aspects such as energy efficiency, reduction of environmental impact, social commitment and good governance. These actions make it possible to manage the direct impacts of the activity.

At the same time, Events act as facilitators of sectoral transformation, promoting knowledge exchange, innovation and the adoption of more sustainable solutions by different economic and social stakeholders.

The impact on the SDGs therefore manifests itself in complementary ways, combining direct and indirect effects. Based on this approach, the report analyses Feria Valencia's contribution to each of the SDGs below, identifying the areas of greatest impact and the practices that reinforce its alignment with the 2030 Agenda.

SDG 1: no poverty

Impact of Feria Valencia

Although poverty eradication is not at the core of Feria Valencia's activity, the institution contributes to this goal indirectly by generating economic activity, employment and social support in its surroundings. In general terms, trade fair activity accounts for 0.49% of Valencian GDP and supports 0.58% of total employment in the Valencian Community, according to official IVIE sources.

As an organisation

Feria Valencia maintains an active commitment to social inclusion and support for vulnerable groups, in its role as infrastructure serving the community. The venue is made available to public administrations and social organisations in situations of need, acting as a logistical space for receiving, sorting and distributing essential supplies. This role was activated significantly during humanitarian emergencies such as the COVID-19 pandemic, the reception of refugees fleeing the war in Ukraine and the recent DANA, enabling the storage and distribution of thousands of essential products intended for particularly vulnerable families.

On an ongoing basis, Feria Valencia's logistics warehouse reserves permanent space for donations managed by different NGOs through the social action association Sumando Contigo, thereby reinforcing its contribution to community well-being, as well as with Valencian Food Bank and Cáritas.

Through its activity

Some of the events organised or hosted at Feria Valencia include collaborations with social action organisations and companies that promote decent employment and labour inclusion for people in vulnerable situations. In this way, trade fair activity becomes a platform for promoting economic opportunities and helping to reduce inequalities.

Likewise, the participation of social organisations in certain events helps to showcase initiatives working directly to combat poverty and improve the living conditions of at-risk groups, extending the reach of their work and strengthening Feria Valencia's contribution to progress on SDG 1.

SDG 2: zero hunger

Impact of Feria Valencia

Feria Valencia's contribution to this goal focuses on promoting sustainable food systems and reducing food waste within its activity.

As an organisation

Feria Valencia contributes to the fight against hunger by managing donations of non-perishable food in collaboration with the Valencia Food Bank and various social organisations. Staff actively participate in collection campaigns, reinforcing the internal commitment to solidarity.

In addition, the venue's logistics infrastructure has been used on numerous occasions to store and distribute food intended for NGOs and vulnerable groups, preventing food waste and ensuring that resources reach those who need them most. In emergencies, this support has intensified, consolidating Feria Valencia as a strategic ally in the humanitarian response.

Through its activity

In carrying out its events activity, Feria Valencia promotes responsible practices among its suppliers, encouraging measures to reduce food waste and optimise resources, and establishing partnerships with charities that redistribute surplus safely and in accordance with health regulations, contributing to a more sustainable and supportive food system.

SDG 3: health and well-being

Impact of Feria Valencia

Feria Valencia contributes to SDG 3 by promoting safe and healthy environments for workers, visitors and participants, as well as providing spaces for information and awareness on health and well-being.

As an organisation

Feria Valencia promotes safe and healthy environments for its staff and all its stakeholders. It has an Occupational Risk Prevention Plan, regular medical check-ups and well-being programmes that encourage healthy habits in the workplace. Also, Feria Valencia provides bicycle parking, facilitating access by bike.

During the COVID19 pandemic, the venue applied strict safety protocols and served as an official storage site for medical supplies, playing a key role in the emergency response.

Its response during the health crisis—including the provision of spaces, preventive management and application of advanced protocols—demonstrates a commitment to community health. Healthy living is also promoted in the workplace, and health-related content is highlighted at the various events

The venue is equipped with automated external defibrillators (AEDs), reinforcing its emergency response and commitment to the health and safety of visitors, employees and participants.

Through its activity

A medical service is activated at events to ensure healthcare for attendees. The food offering is based on a varied diet aligned with the principles of the Mediterranean diet, and rest areas are provided.

Feria Valencia hosts national and international events specialising in the medical and healthcare fields, including CIRSE, the National Congress of Dermatology and Venereology, EAACI, and Laboralia, among others.

SDG 4: quality education

Impact of Feria Valencia

The venue contributes to this goal through training and knowledge exchange, acting as a platform for training, knowledge transfer and continuous learning for professionals and productive sectors.

As an organisation

Feria Valencia supports the training of its team through internal programmes including specialised courses, coaching sessions and technical workshops in key skills.

This training approach helps ensure that staff have the tools needed to address the sector's challenges and provide a quality service to all stakeholders.

Through its activity

All kind of events -trade fairs, congresses and professional gatherings- organised by and at Feria Valencia, act as spaces for knowledge transfer and sectoral updating.

Almost all events include conferences, technical workshops, information panels and educational activities that disseminate good practices and foster professional learning. Likewise, every event hosted by Feria Valencia usually includes a congress or talk programme that drives innovation, the exchange of experiences and dialogue among professionals, contributing to the development of the human capital of the sectors represented.

In this way, Feria Valencia consolidates its role as a driver of knowledge, contributing to professional development and the competitiveness of productive sectors.

SDG 5: gender equality

Impact of Feria Valencia

Feria Valencia demonstrates its commitment to gender equality through internal policies and the promotion of equitable participation in its events.

As an organisation

Feria Valencia demonstrates its commitment to gender equality through internal policies that guarantee equity, diversity and respect in the workplace. In 2022 it implemented its Equality Plan, which establishes measures to prevent any form of discrimination and promote equal opportunities.

The institution applies work-life balance policies, promotes the inclusion of people with disabilities in accordance with Law 13/1982, and maintains specific protocols against harassment and discrimination. In addition, half of the workforce is made up of women, reflecting a balanced organisational structure and a genuine commitment to equality in access, promotion and internal participation.

Through its activity

In the programme of each event, Feria Valencia encourages equitable representation in presentations, panels and educational activities, promoting a balanced presence of leading women and men in each sector.

In addition, social-inclusion hostesses at events illustrate an active pathway into the labour market, strengthening the presence of women in vulnerable situations and expanding access to employment opportunities.

SDG 6:
clean water and sanitation

Impact of Feria Valencia

Responsible water management is a priority for Feria Valencia, both in its facilities and at its events.

As an organisation

Feria Valencia manages water responsibly through strict monitoring of consumption in its facilities and the application of efficiency and saving measures. To encourage mindful use, it provides informational signage in bathrooms and common areas reminding people of the importance of responsible consumption.

In addition, at several of its events, Feria Valencia offers free water through osmosis fountains. The progressive installation of sustainable water fountains and the elimination of single-use plastic -by using cardboard cups or reusable cups-, reinforce its commitment to responsible water management and waste reduction.

Through its activity

Feria Valencia organises Efiaqua, an event specialising in the digitalisation, efficient management and decarbonisation of the water cycle, contributing to the dissemination of innovative solutions and raising sector awareness of the importance of sustainable water management.

These actions align event activity with the principles of SDG 6 and encourage responsible practices among all stakeholders.

SDG 7:
affordable and clean energy

Impact of Feria Valencia

Feria Valencia promotes responsible energy management based on efficiency, emissions reduction and the progressive incorporation of renewable energy.

As an organisation

It has an Electricity Consumption Optimisation Plan that continuously monitors lighting, climate control and electrical equipment, adjusting consumption and improving the venue's energy performance. Currently, 100% of the lighting is LED, representing a significant advance in efficiency and emissions reduction.

The institution is making decisive progress in its energy transition through one of the largest rooftop photovoltaic projects at exhibition venues in Spain. 40,000 m² of roofs have been transformed into a solar farm integrating 4,600 latest-generation panels, capable of generating each year the energy equivalent to the consumption of 900 households. This project will reduce energy consumption by 41%, saving 4 million kWh per year and avoiding the emission of 500 tonnes of CO_2 annually, consolidating a clear path towards energy efficiency and decarbonisation.
In terms of internal mobility, the venue has charging points for electric vehicles and uses scooters and electric vehicles for maintenance tasks and internal travel.

The digitalisation of materials, intelligent consumption management and resource optimisation also contribute to more efficient energy use across all venue operations.

Through its activity

Feria Valencia organises and hosts events that promote the energy transition and innovation in sustainability, including:

16th European Biomass Conference & Exhibition, 5th World Conference on Photovoltaic Energy Conversion, Ecofira, International Environmental Solutions Trade Fair, and Energy Global Expo and Congress, among others.

Through these events, Feria Valencia acts as a platform for sharing knowledge, promoting the adoption of clean energy and the sustainable transformation of productive sectors.

SDG 8: decent work and economic growth

Impact of Feria Valencia

Feria Valencia contributes directly and significantly to SDG 8 by generating economic growth and employment, acting as one of the main drivers of economic development in the Valencian Community.

As an organisation

Feria Valencia acts as an economic engine, generating quality employment and energising business activity in its surroundings. It defends decent employment throughout the value chain, promoting ethical labour practices among suppliers, partners and service companies linked to the venue. The institution generates 0.49% of Valencian GDP and 0.58% of total employment, in addition to contributing €16.7 million to local tourism, driving sectors such as hospitality, catering and transport.

Feria Valencia's own business model fosters quality employment in event organisation, stand construction and dismantling, auxiliary services and associated local commerce. Feria Valencia promotes fair working conditions throughout the event logistics chain and encourages the hiring of SMEs, self-employed people and local entrepreneurs, reinforcing inclusive economic growth.

Through its activity

According to the latest economic impact study by Ivie, activity associated with Feria Valencia supports around 12,000 full-time equivalent jobs, largely derived from the economic impact induced by its event activity.
This impact is explained by the multiplier effect of trade fairs on exhibiting companies, which attribute approximately 7% of their total sales to the agreements and business opportunities generated at Feria Valencia.

Many events include training, entrepreneurship and professional-updating programmes, contributing to skills development and strengthening the business fabric; various events also collaborate with social associations that integrate people in vulnerable situations, combining economic dynamism with social inclusion and expanding the positive impact of MICE sector.

SDG 9: industry, innovation and infrastructure

Impact of Feria Valencia

Feria Valencia acts as economic infrastructure serving industry and innovation, facilitating market access, knowledge transfer and continuous improvement of the products and services of participating companies.

The economic impact study shows that exhibiting companies generally display more dynamic, innovative and internationalised behaviour than the Valencian average, demonstrating the fair's role as a catalyst for competitiveness.

As an organisation

Feria Valencia drives innovation and digital transformation through a more efficient and sustainable management model. It promotes intrapreneurship and trains its staff in skills related to digitalisation and process improvement.

The venue offers infrastructure capable of hosting everything from major industrial events to specialised sectoral gatherings. The progressive modernisation of its facilities and the digitalisation of services reinforce its role as a platform for economic activity. As a public company closely linked to the Regional Ministry of Industry, Tourism, Innovation and Trade, it collaborates on programmes and grants aimed at participating companies, helping to strengthen competitiveness and the adoption of innovative solutions.

Through its activity

The events it organises and hosts energise business innovation. The events format encourages companies to present new products, improvements and advanced solutions, driven by direct contact with customers and professionals.

The event model democratises market access: large companies, SMEs and start-ups find a space to position themselves, test products, obtain feedback and improve their solutions. This continuous exchange between supply, demand and innovation makes Feria Valencia an effective platform for improving products, processes and business models, contributing to industrial strengthening and the development of economic infrastructure aligned with SDG 9.

SDG 10: reduced inequalities

Impact of Feria Valencia

Feria Valencia contributes to SDG 10 by promoting social inclusion and reducing barriers to access to employment and economic activity.

As an organisation

Feria Valencia seeks economic profitability that also generates long-term social value. In its ordinary activity, the venue integrates social associations that work with vulnerable people and promote the labour integration of people at risk of exclusion, supporting access to decent employment.

In situations of humanitarian emergency, Feria Valencia is known as the venue of solidarity, placing its facilities and resources at the service of citizens. During the COVID19 pandemic it was an official medical warehouse, and during the war in Ukraine it acted as a reception centre for people fleeing the country, in collaboration with organisations such as Juntos por la Vida.

During the DANA, the venue once again played an essential role, making the entire site available for emergency management, affected people, storage of essential supplies and logistical support for the administrations and organisations involved. This response was made possible through collaboration among companies, sectoral associations, administrations and civil society.
In addition, staff participate in food collections for groups at risk of exclusion, reinforcing the internal social commitment.

Through its activity

Events organised at Feria Valencia promote inclusion by offering adapted access, inclusive services and the possibility of incorporating sign-language interpreters when an event requires them. Likewise, it includes a social-inclusion host service that supports participation and ensures a welcoming experience for all attendees.

In addition, numerous events include NGOs and social organisations working for inclusion and equal opportunities. The reuse of banners through agreements with the NGO Proyectos Extraordinarios, which employs women at risk of exclusion, is a notable example of a circular economy with social impact, combining environmental sustainability with labour reintegration.

Feria Valencia hosted the 1st Training and Employment Fair for young people living in residential care and young people who have left the care system, aimed at creating greater opportunities for them.

SDG 11: sustainable cities and communities

Impact of Feria Valencia

Feria Valencia contributes to SDG 11 by providing a space where administrations, companies and professionals address urban challenges and share solutions for more sustainable, resilient and inclusive cities. Its activity facilitates reflection, innovation and the adoption of practices aligned with sustainable urban development.

As an organisation

The venue acts as strategic urban infrastructure, integrated into metropolitan dynamics and committed to responsible resource management. It promotes sustainable mobility through charging points for electric vehicles and parking for bicycles and VMP, and applies efficiency and sustainability criteria in managing its facilities. As a public facility, it offers meeting spaces that contribute to improving urban environments and community well-being.

Through its activity

Events act as catalysts for urban innovation, addressing issues such as water management, the circular economy, adaptation to climate change and the creation of healthy environments. Events such as Iberflora, EFIAQUA, ECOFIRA and Sportcities bring together key stakeholders to share solutions and debate the future of cities. These meetings combine exhibition, technical knowledge and strategic reflection, driving more sustainable, inclusive urban models focused on quality of life, in line with the complementary environmental and social SDGs.

SDG 12: responsible consumption and production

Impact of Feria Valencia

Feria Valencia promotes SDG 12 by encouraging responsible practices in resource use and waste management.

As an organisation

Feria Valencia applies a responsible management model based on the circular economy, waste reduction and efficient resource use. It has an integrated waste management protocol in accordance with Law 10/2000 on Waste of the Valencian Community, which includes selective separation, annual monitoring of the waste generated and a specific area for treating waste from stand dismantling, managed by authorised operators.

The institution encourages the use of recyclable materials in fit-outs and promotes the reuse of decorations and exhibition elements among its suppliers at different events, significantly reducing waste generation. At the same time, it promotes the digitalisation of processes to minimise paper use and move towards more sustainable procedures. The progressive elimination of carpets and other single-use materials reinforces this commitment.

Another notable example is the reuse of events banners through agreements with social organisations that transform them into new products while creating employment for women at risk of exclusion, combining environmental sustainability with positive social impact.

Through its activity

At every event, Feria Valencia applies responsible production criteria, encouraging the reuse of structures and the selective collection of waste. It also promotes the reuse of accreditations and credentials in its activity.

Catering services are moving towards a sustainable catering model, prioritising local products, reducing single-use packaging and progressively eliminating plastics. In addition, selecting suppliers according to environmental and social criteria helps extend sustainability throughout the event value chain.

These practices reduce environmental impacts and promote responsible consumption among exhibitors, visitors, partner companies and organizers.

SDG 13: climate action

Impact of Feria Valencia
Feria Valencia contributes to SDG 13 by reducing its environmental footprint and promoting solutions to address climate change.

As an organisation
Feria Valencia promotes a climate strategy focused on emissions reduction, energy efficiency and the transition to renewable energy. The institution has completed the replacement of 18,000 lights with LED systems, reducing installed capacity by 65% and moving towards a more efficient energy model.

The venue has just completed a major decarbonisation project in the trade fair sector: the transformation of 40,000 m² of roofs into a solar farm made up of 4,600 photovoltaic panels. This will reduce the venue's energy consumption by 41% and avoid the emission of around 500 tonnes of CO_2 per year. Co-financed with Next Generation EU European funds, this project reaffirms Feria Valencia's commitment to helping drive the sector's energy transition.

The climate strategy is complemented by low-emission mobility measures, such as charging points for electric vehicles and a fleet of electric vehicles and scooters for travel within the venue. Digitalised materials, intelligent consumption management and control of water use reinforce a more efficient operating model adapted to climate challenges.

Through its activity
Events organised at Feria Valencia incorporate climate criteria that help reduce emissions associated with attendance and the operation of events. The use of public transport, shuttle services at large events and shared mobility is encouraged, reducing the footprint arising from travel.

The venue also encourages clients to adopt low-carbon practices, such as sustainable stands, consumption optimisation, reduced materials, local catering and the use of osmosis water fountains. These recommendations are set out in a sustainability guide that helps participants integrate climate criteria into every phase of the event.

SDG 14: life below water

Impact of Feria Valencia

Feria Valencia's contribution to SDG 14 is modest and indirect, as its activity is not linked to marine ecosystems. Even so, the venue can contribute responsibly by reducing waste and improving the management of materials that could ultimately end up in aquatic environments.

As an organisation

Feria Valencia's activity is not directly linked to the protection of marine ecosystems, but it can contribute indirectly to this goal by reducing waste and improving the management of materials that might otherwise end up in aquatic environments. The venue is making progress in reducing the use of single-use plastics, promoting the correct separation of packaging and the progressive replacement of disposable materials with more sustainable alternatives. These actions, although modest, help minimise the risk of certain waste ending up in urban waterways or coastal areas.

Through its activity

At events, Feria Valencia encourages practices that help reduce the generation of plastic waste, such as the use of compostable or reusable catering containers, selective collection of packaging, the installation of osmosis water fountains at some events, and awareness messages about responsible recycling.

These measures, applied consistently and realistically, also help ensure that less potentially polluting waste reaches rivers, beaches or seas, aligning discreetly and coherently with the spirit of SDG 14.

SDG 15: life on land

Impact of Feria Valencia

Feria Valencia's contribution to this goal is indirect, as its activity is not linked to the management or conservation of natural ecosystems. Even so, certain management and organisational practices can help reduce pressure on terrestrial resources and encourage more responsible use of materials.

As an organisation

Although it does not manage natural areas, Feria Valencia contributes indirectly to SDG 15 through practices that reduce pressure on terrestrial resources. The use of local and nearby products in catering reduces freight transport and supports the territory's agricultural biodiversity. Reusing decorations, structures and materials between events reduces demand for raw materials and avoids unnecessary extraction of natural resources, in line with the principles of urban sustainability promoted by València as European Green Capital.

Through its activity

When organising events, Feria Valencia applies criteria that help minimise environmental impact: thorough venue cleaning, correct waste management and a preference for reusable or recyclable materials in stands and fit-outs. These simple, consistent measures contribute to more responsible resource use and the indirect protection of terrestrial ecosystems.

Events such as Ecofira, focused on environmental solutions and clean technologies, bring together specialised companies and organisations working in areas related to sustainable management and resource efficiency, reinforcing this approach through events activity.

In addition, the 16th European Biomass Conference & Exhibition (2008) brought companies and experts from the biomass sector together at Feria Valencia.

SDG 16: Peace, Justice and Strong Institutions

Impact of Feria Valencia

Feria Valencia's contribution to this goal focuses on strengthening transparency, ethics and good governance, areas in which it can exert direct influence as a public institution. Although its activity is not linked to the administration of justice or security, it can promote responsible practices that reinforce trust and integrity in its surroundings.

As an organisation

Feria Valencia maintains a firm commitment to transparency, ethics and good governance, essential pillars of strong institutions. It has a Code of Ethics, a Compliance programme and customer service channels (suggestions, complaints and claims) that reinforce accountability and trust with its stakeholders.

Public procurement is managed according to criteria of legality, transparency and competition, ensuring clear and traceable processes. In addition, the venue works steadily with numerous recognised social organisations, ensuring responsible and transparent management of donations and reinforcing institutional integrity in its partnerships.

Through its activity

Events organised at Feria Valencia act as spaces for dialogue, meeting and collaboration, fostering social cohesion and the participation of multiple stakeholders.

The institution encourages events to include codes of conduct, respect criteria and anti-corruption measures, ensuring ethical, inclusive and safe environments for exhibitors, visitors and organisers. Likewise, its participation in sectoral sustainability and good-practice networks helps strengthen governance in the trade fair sector and disseminate responsible standards among companies and organisations participating in its events.

SDG 17: Partnerships to achieve the goals

Impact of Feria Valencia

Feria Valencia's contribution to this goal is based on its ability to connect public, private and social stakeholders, creating spaces for cooperation that strengthen sustainable development and the competitiveness of the territory.

As an organisation

Feria Valencia, as a public company belonging to the Generalitat Valenciana, bases part of its strength on a broad network of institutional, business, technological and social partnerships that reinforce its contribution to sustainable development. It works steadily with public administrations, sectoral associations, chambers of commerce, business confederations and technology institutes, promoting projects that foster innovation, economic development and the competitiveness of the productive fabric. This is complemented by an ongoing relationship with recognised social organisations, ensuring responsible management of solidarity campaigns and reinforcing institutional trust in its activity.

Through its activity

Events organised at Feria Valencia act as connection and collaboration platforms, where companies, administrations, sectoral stakeholders and innovation centres share knowledge, establish synergies and create networks that amplify collective impact. Highlighting the Sustainable Development Goals at events and lending or reusing spaces for social campaigns reinforce awareness and joint action.

This ecosystem of partnerships consolidates Feria Valencia as a space that drives cooperation, innovation and sustainable development in its broadest sense.

Feria Valencia, as a public-sector company of the Generalitat Valenciana, is moving towards a more efficient, responsible management model aligned with the territory's environmental and social priorities. Its activity combines operational sustainability, social commitment and a broad network of partnerships that strengthen innovation and economic development.

The venue makes its most significant contribution to SDGs 8, 9, 12 and 17, where its role as public infrastructure, business driver and space for cooperation is particularly visible.

With every project, every event and every collaboration, Feria Valencia strengthens its role as an institution committed to progress and sustainable development in the Valencian Community.
